PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years of commercial experience building web and mobile applications, backend APIs and database-driven systems using React, Vue, TypeScript, Node.js and Go. Experienced in delivering maintainable digital products, system integrations, automated testing and production support. Based in Brisbane and open to frontend, application and full-stack development opportunities.

TECHNICAL SKILLS

- **Frontend:** React, Next.js, React Native, Vue, Nuxt, TypeScript, JavaScript, Tailwind CSS, Storybook
- **Backend:** Node.js, Express, NestJS, Elysia, Go, Gin, Java, Spring Boot, Python, FastAPI, REST APIs, GraphQL
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Prisma, TypeORM
- **Cloud & Testing:** AWS, GCP, Cloud Run, Docker, GitHub Actions, CI/CD, Vitest, Playwright, Jest, Selenium

WORK EXPERIENCE

Entwined Brisbane, Australia
Software Engineer *Jan 2024 – Jul 2026*

- Modernised a legacy React frontend into a Nuxt 4 monorepo, consolidating seven layers for 30+ tenants.
- Led the refactoring of the shared Nuxt component library and Nuxt UI upgrade across device, site, user, administration and support workflows, improving frontend scalability, reusability and user experience.
- Contributed to Entwined's first product AI integration by building Go MCP tools for finding, retrieving, and refreshing devices and querying sites through the official Model Context Protocol SDK.
- Contributed to the migration from NestJS services to Bun and Elysia, extending GraphQL Yoga/Nexus resolvers and MongoDB queries for tenant-aware device and site data.
- Independently built and launched Go/Gin integrations for Vnnox and TeamViewer, handling paginated ingestion, provider-data cleansing, identifier normalisation, asset matching and NATS status events.

Property Credit Gold Coast, Australia
Software Developer (Industry Placement) *Jul 2023 – Oct 2023*

- Rebuilt 10+ customer-facing pages with React, Next.js, TypeScript and Zustand, including a reusable Google Places Autocomplete component and a multi-step application flow used by real customers.
- Developed property-finance data workflows using tRPC, Prisma and PostgreSQL, implemented the platform's first Stripe integration for card payments, Apple Pay and Google Pay, and contributed to AWS maintenance.

Vizen Tech Beijing, China
Software Engineer *Oct 2021 – Oct 2022*

- Delivered a smart-city geospatial platform for monitoring and managing 10+ buildings in Beijing, integrating React interfaces with proprietary WebGL-based 3D engine and deploying the solution to Alibaba Cloud.
- Built a React Native field-collection application for drone-derived data, supporting map positioning, geospatial annotation, data upload, offline workflows and processed-result visualisation.
- Developed Spring Boot and MySQL services with RabbitMQ-based processing pipelines, cleaning and transforming incoming monitoring data before delivering real-time updates to web and mobile clients.

Medex Tech Beijing, China
Software Engineer *Sep 2020 – Oct 2021*

- Built React, Next.js and Redux clinical workflows integrated with Spring Boot and Oracle services, supporting patient registration, appointments, ECG reports and medication orders across nearly 100 hospitals.
- Developed React and ECharts dashboards for hospital operations, presenting real-time registration, queue and clinical activity data across approximately 10 hospitals.
- Delivered React Native ambulance features integrated with live location, ECG and hospital systems through C# service interfaces, enabling emergency teams to monitor patient data before arrival.

EDUCATION

Queensland University of Technology Brisbane, QLD
Master of Information Technology, Major in Networks *Feb 2018 – Dec 2019*
